DT12 Rec'd PCH/PTO 0 5 JAN 2005

Respectfully submitted,

Michael J. Striker  
Attorney for Applicant(s)  
Reg. No. 27233

## Claims

1. (original) A device for a hair dryer, having a fan and a heater for generating a central hot-air stream and having a concentric cold-air stream at a blower opening, characterized in that as the device (1), an air nozzle attachment (8) embodied as connectable to the blower opening (7) is provided of such a kind that the air nozzle attachment (8), from the central hot-air stream (5) and the concentric cold-air stream (6) of the hair dryer (2) generates a hot-air stream (9) and a cold-air stream (10) that are located side by side.

2. (original) The device of claim 1, characterized in that the air nozzle attachment (8), on the end with the blower opening (7), has a central conduit entrance (11) and a coaxial conduit entrance (12), and the central conduit entrance (11) discharges into a hot-air nozzle (13) and the coaxial conduit entrance (12) discharges into a cold-air nozzle (14); and that the hot-air nozzle (13) and the cold-air nozzle (14) are located side by side.

3. (currently amended) The device of ~~at least~~ claim 2, characterized in that the hot-air nozzle (13) and the cold-air nozzle (14) are each designed as a flat nozzle (15) and are each located with one flat side against one another.

4. (currently amended) The device of ~~at least~~ claim 2, characterized in that the hot-air nozzle (13) and the cold-air nozzle (14) have at least approximately the same blower cross section (16, 17).

5. (currently amended) The device of ~~at least~~ claim 2, characterized in that the hot-air nozzle (13) has a smaller blower cross section (16) than the blower cross

section (17) of the cold- air nozzle (14).

6. (currently amended) The device of ~~at least~~ claim 2, characterized in that the hot-air nozzle (13) and the cold-air nozzle (14) end at the same length.

7. (currently amended) The device of ~~at least~~ claim 2, characterized in that the air nozzle attachment (8) is embodied as being axially rotatably connectable in the region of the blower opening (7).

8. (currently amended) The device of ~~at least~~ claim 2, characterized in that the air nozzle attachment (8) is connectable with the region of the blower opening (7) by means of a snap-on connection (18) that can be detached again.

9. (currently amended) The device of ~~at least~~ claim 2, characterized in that the air nozzle attachment (8) comprises heat-resistant plastic (19).

10. (currently amended) The device of ~~at least~~ claim 2, characterized in that the outer parts of the hot-air nozzle (13) and of the cold-air nozzle (14) are identified visually differently.

11. (currently amended) The device of ~~at least~~ claim 10, characterized in that the outer part (20) of the hot-air nozzle (13) is identified by a red color, and the outer part (21) of the cold-air nozzle (14) is identified by a blue color.

12. (currently amended) The device of ~~at least~~ claim 2, characterized in that a hot-air nozzle attachment (23) is provided for the air nozzle attachment (8) for selective dampening.
